

STUCAN MATERIAL LIBRARY

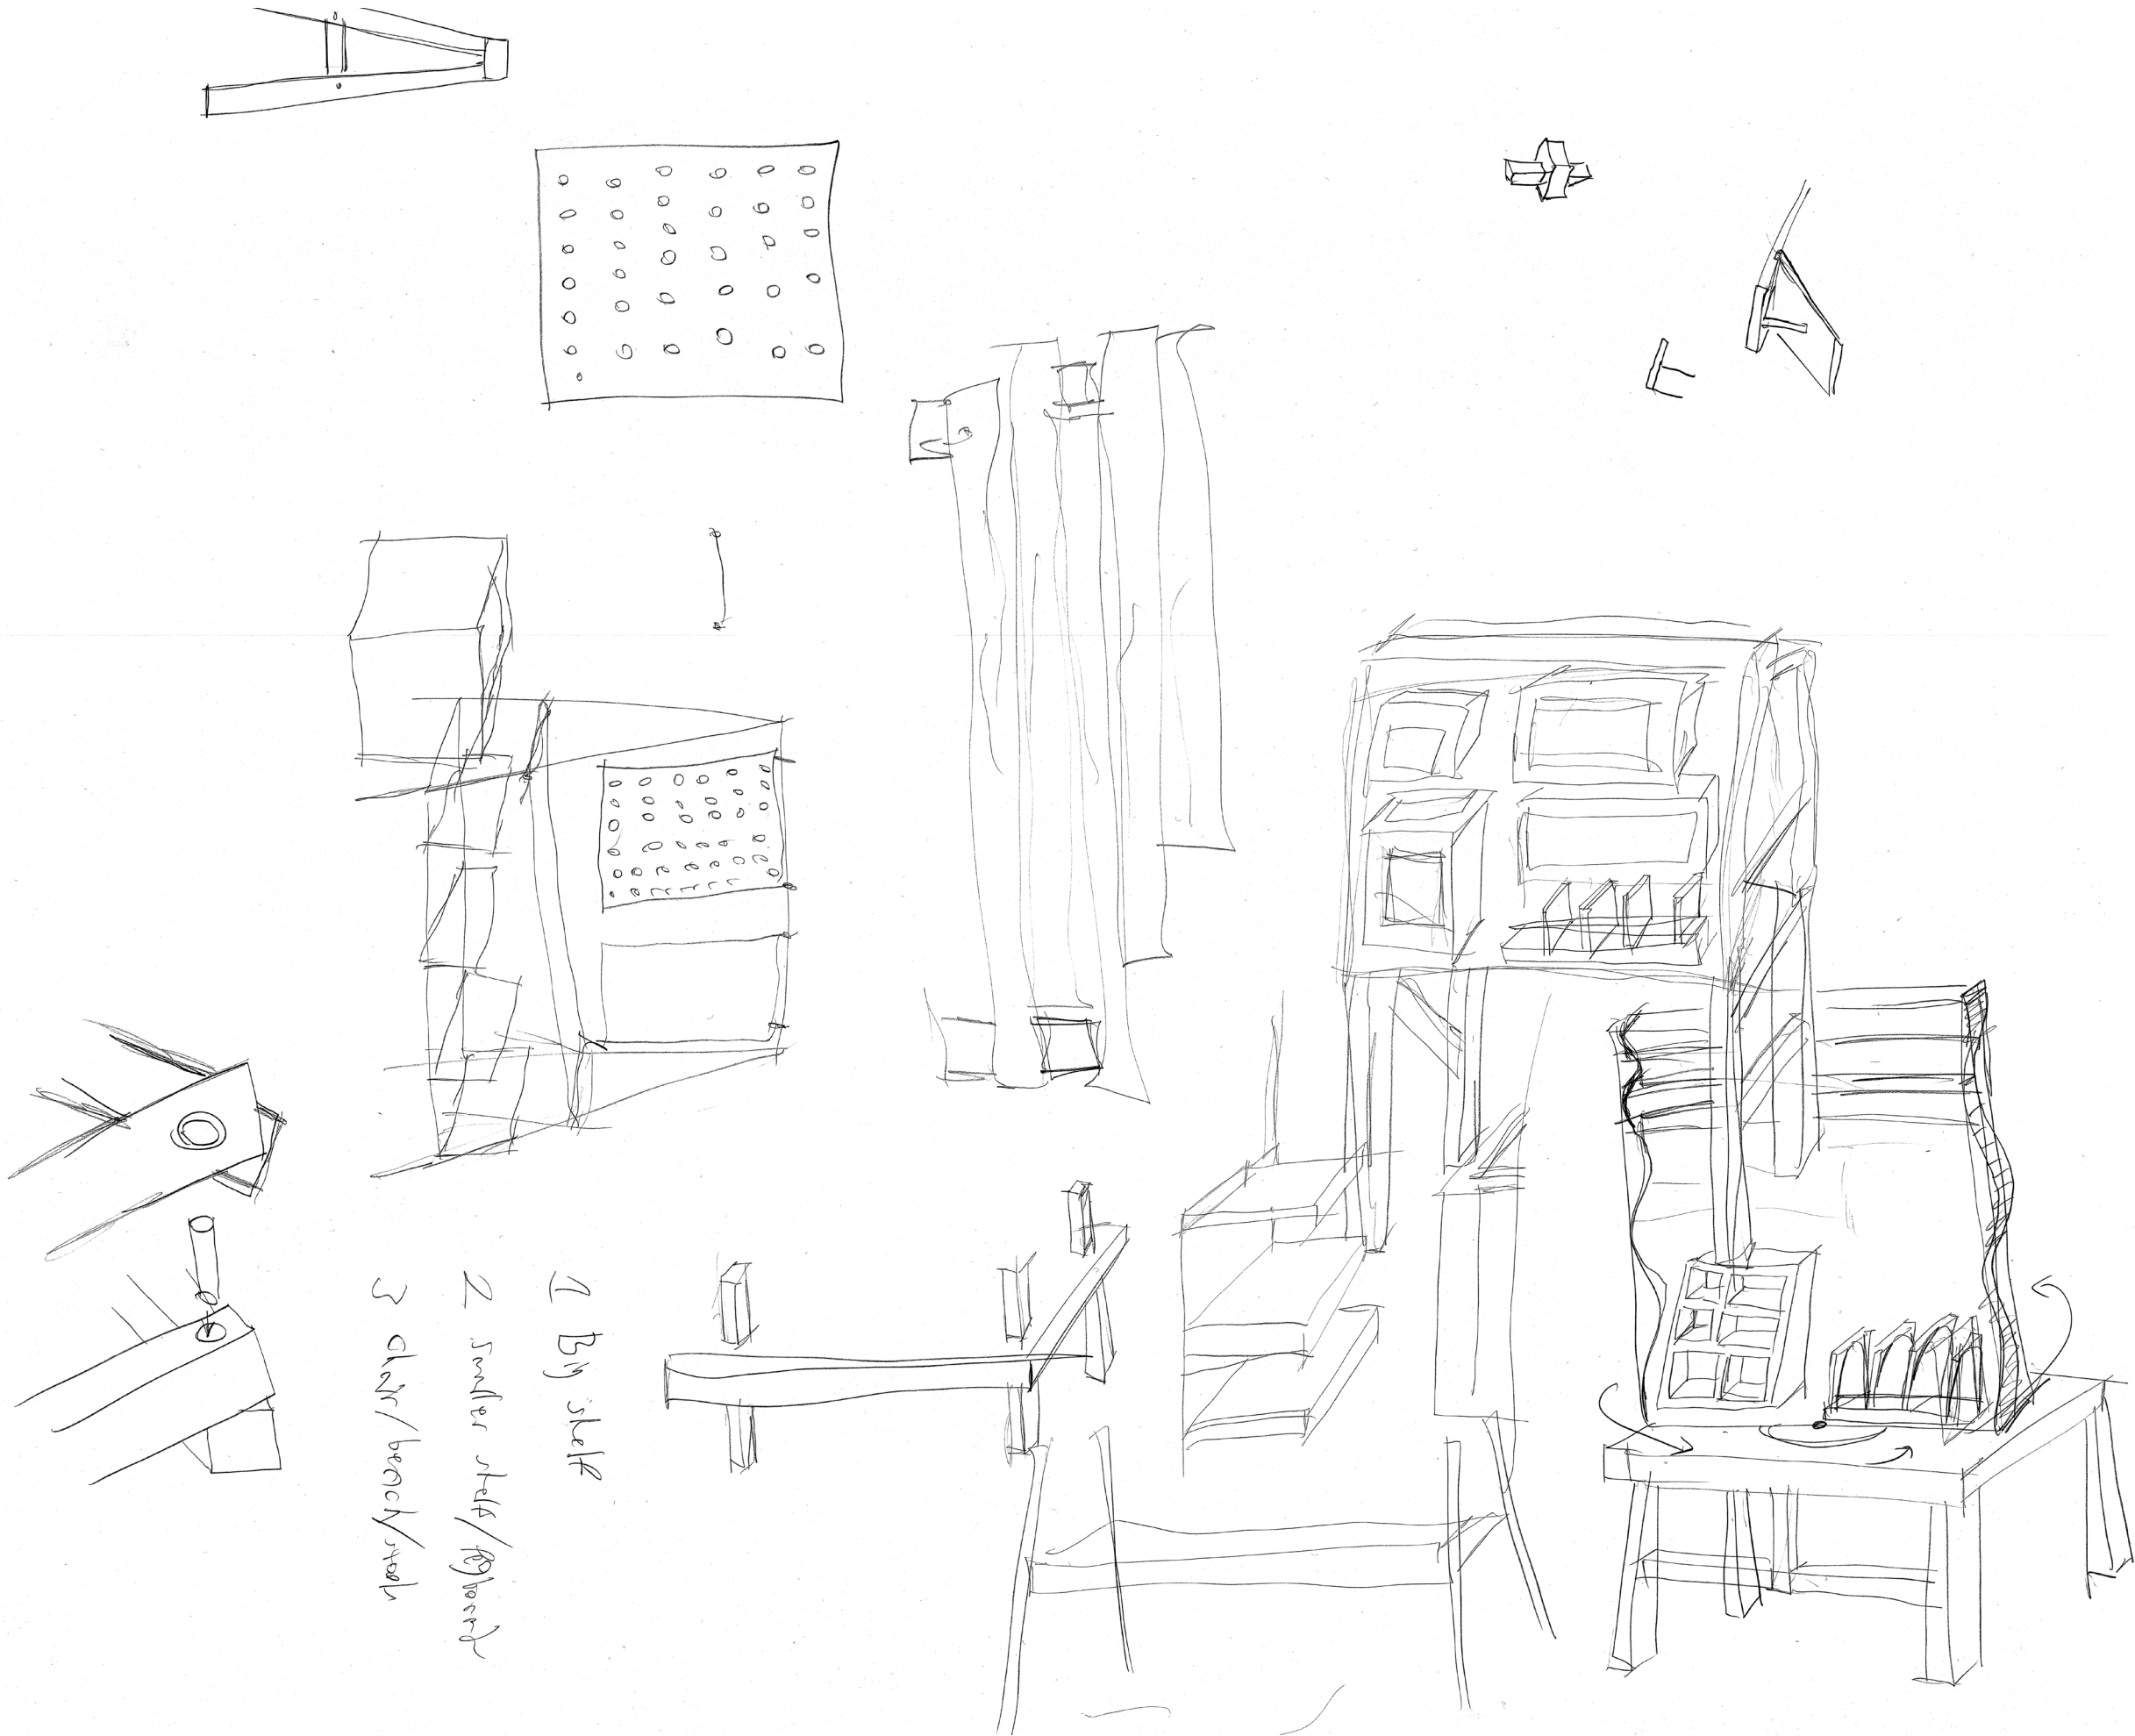

Pulling on ideas from the Student Climate Action Network (StuCAN) Entanglement Festival, I led a concept for one group during a Live Build event to design a stand as a permanent home for StuCAN's material library within the studio. Another group designed and built a bench for the common space in studio. All of the work was produced with scrap or discarded material from the art school's wood workshop.

A material library of alternative and low-carbon materials for architecture students to consider in their projects helps set them up for innovative and sustainable designs throughout their education and practice.

My efforts at establishing a home for a material library at the Mackintosh School of Architecture was commended in me being awarded the Stage 4 Sustainability Prize.
